Objective: To create a text version of an abstract for each of the 270 papers listed below, which are searchable. All of these papers have abstracts or introductions, but the papers are scanned objects, rather than a text file, or the introduction is too long to be considered an abstract.

Houston Chapter Goal: to create an abstract for each of the papers by April 1st 2014.

How you can help: You can create an abstract for several papers

1. Find a paper title that appeals to you, or just randomly choose a paper(s).
2. Advise Andy, which papers you have volunteered to create an Abstract, to avoid duplications.
3. Download the paper from the SAWE Papers Database, it’s free for members.
4. Read the paper, and confirm that the abstract is suitable or that the first paragraph(s) are suitable
5. Convert the applicable section to a MS Word Document, include Paper No, title and abstract.
6. Send your abstracts to Andy Schuster at the email above.

Notes from others: (based on creating 1500 other abstracts)

- Many of the papers are pictures so it is hard to rescan the document using an OCR format.
- Retyping the abstract is sometimes the simplest thing to do, but follow these rules
  - Avoid making corrections. Obviously you can fix minor typos
  - Use as much of the original text as possible
  - Do not update the terminology, sentence grammar or syntax when retyping
- It should take you 30 minutes or less per 13 page paper, including retyping the abstract.
